REASONS FOR ALLOWANCE

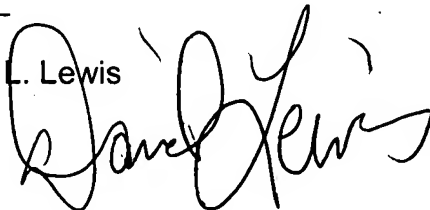

1. Claims 15-29 are allowed over the prior art of record.
2. Claims 1-14 have been cancelled.
3. The following is an examiner's statement of reasons for allowance: the Applicant's arguments filed on 2/28/2007 are in part persuasive. The feature of independent claim 15 directed towards allowable subject matter is the feature wherein a potential difference between said electrodes causes said at least one charged particle to migrate toward at least one of said two electrodes, thereby effecting a change in a visual state of said display. Bryning as broadly interpreted teaches of an electrophoretic display medium, however the two electrodes disposed on said substrate failed to provide for said potential difference effecting a change in a visual state of the display as argued by the Applicant. The feature of independent claim 24 directed towards allowable subject matter is the feature wherein at least one particle has a first optical property, two electrodes adjacent said electrophoretic display medium having a second optical property, and at least one electrode having said first optical property, wherein application of a voltage potential to said two electrodes of the second optical property changing the visual state of the display. As argued by the Applicant Bryning in combination with Ota fails to teach of the claimed combination of optical properties affecting visual change in the display. Further, none of the other prior art of record suggests or teaches of the claimed limitations. Therefore said features of claims 15 and 24 in combination with the other limitations of the claims makes claims 15-29 allowable over the prior art of record
